## UBT470 – Provide ultrasound treatments

Case Study/Internal Practical Assessment Criteria for Provide ultrasound treatments		
Learner name:		
Assessor/Tutor name:		
Client reference:		
I confirm that the learner has:	P	R
Prepared client, area and self for treatment including the use of appropriate PPE, in line with health and safety protocols and legislation, ensuring that all resources are ergonomically placed, and the treatment area is well lit and ventilated.		
Confirmed all consultation details, skin/body assessments and relevant tests had been performed, checked results and contra-indications.		
Performed skin sensitivity tests and visual examination of the condition and health of the client's skin to establish the skin/body characteristics and condition and confirmed the client's suitability for treatment.		
Used a range of communication skills, discussed, and confirmed realistic and achievable treatment objectives and the likely healing process including associated time frames.		
Discussed possible contra-actions and expected treatment reactions and checked client understanding regarding the importance of adherence to aftercare protocols and future treatment intervals.		
Provided information regarding the 'cooling off period' and obtained the client's signed informed consent to proceed with the treatment.		
Gained consent for, and taken, pre-treatment visual media records, discussed, agreed, and confirmed the desired treatment outcomes with the client.		
Demonstrated pre-treatment cleansing, agreed treatment area, and gained signed consent for the treatment to proceed.		
Prepared skin in line with manufacturers' instructions and protected vulnerable areas of body where required.		
Ensured client's clothes and modesty were protected appropriately.		
Selected, checked, and prepared the appropriate application heads and products suitable for the treatment objectives, followed manufacturers' instructions and recorded all details.		
Positioned client and self for the treatment, ensuring full support and access to the treatment area minimised risk of strain or injury.		
Performed a safe, effective treatment following recommended protocols, using and adapting techniques and adjusting the intensity of the treatment as appropriate to each area and condition treated to achieve the desired outcomes		

Maintained adequate skin support in all treatment areas, worked systematically and evenly ensuring the zones do not overlap.		
Moved the handpiece constantly, slowly, and consistently keeping it in full contact with the treatment area.		
Monitored the treatment area and checked client wellbeing throughout the treatment, giving reassurance and taking breaks where necessary.		
Worked to a commercially acceptable time in line with treatment objectives, concluded the treatment appropriately and applied post treatment products according to manufacturer guidance.		
Demonstrated safe disposal of all treatment waste in line with organisational requirements and legislation.		
Evaluated treatment outcomes, took post treatment visual media records, and gained client feedback including signed approval accepting the results of the treatment.		
Given verbal and written aftercare recommendations including advice on further treatments and maintenance required with appropriate intervals and gained signature from the client agreeing to comply with all aftercare/post treatment advice.		
Recorded all treatment details in line with organisational requirements and legislation.
